ZENITHRISKSTRATEGIES.COM

Move from buying insurance to engineering risk

Zenith helps brokers and employers replace transactional renewals with a coordinated, multi-year risk strategy.

The problem with the annual cycle

Traditional models often separate underwriting, clinical decisions, vendor performance, and renewal strategy. That fragmentation makes it difficult to see what is driving cost or to act early.

What changes

- One integrated view of plan risk
- Clear ownership across partners
- Earlier intervention and better visibility
- A renewal process built around performance

The objective is not simply to transfer risk. It is to understand it, influence it, and finance it with discipline.

The Zenith approach

Our model combines predictive underwriting, clinical stewardship, transparent economics, and execution support. Each discipline informs the others, creating a more accountable operating system for healthcare risk.

Four capabilities work as one operating model

The value is created through coordination, not through isolated products.

Predictive underwriting

- Risk segmentation beyond lagging claims
- Clear pricing logic and renewal rationale
- Multi-year planning scenarios

Clinical stewardship

- High-cost claimant visibility
 - Care-pathway and vendor coordination
 - Intervention summaries for decision-makers
-

Captive integration

- Feasibility and structure review
- Alignment of retained, pooled, and transferred risk
- Surplus and volatility considerations

Strategic execution

- TPA, carrier, broker, and vendor coordination
- Implementation roadmaps
- Ongoing performance reviews

A disciplined path from concept to performance

Every engagement begins with fit and moves toward measurable operating discipline.

01**Feasibility**

Assess risk profile, funding structure, data quality, and strategic fit.

02**Partner coordination**

Align the broker, TPA, carrier, clinical partners, and program stakeholders.

03**Program launch**

Translate the approved structure into a practical implementation plan.

01**Renewal strategy**

Review experience, interventions, vendor performance, and alternative structures.

02**Ongoing management**

Maintain governance, visibility, and accountability throughout the plan year.

Renewal becomes a planning process, not a last-minute negotiation.

The right structure starts with the right questions

Use these questions to frame the next conversation with Zenith.

- ☐ Do we have reliable census, claims, and renewal information?
 - ☐ Which risks should be retained, pooled, or transferred?
 - ☐ Where are clinical or vendor decisions affecting claim outcomes?
 - ☐ Are incentives aligned across every program partner?
-
- ☐ What would a three-to-five-year strategy need to accomplish?
 - ☐ How should success be measured during the plan year?
 - ☐ Which decisions must be made before the next renewal cycle?
